Hello ladies!

Attached is a draft of the Oil Spill activity for your first visit. I will incorporate chemistry concepts into my intro and tried to include chemistry type questions into the conclusion. Please look over what I have and provide feedback. I am happy to make changes so the lesson fits well with what you do in the classroom.

Hey Rebecca, I am glad you sent this to me I was going to do something very similar but now I don't have to. I know that since my kids are so so low, they will need help by you restating the questions for them. especially numbers 1, 4 and 5 and I highly doubt no matter what you do they will not understand number 7. But of course I don't want you to change it because it needs to be rigorous for the other kiddos. But if you could just reword it for them when you are going over it. Like for number one "What did it do to the oil when you blew on it and how did that mess up your clean up?" you know what I mean?

I will definitely support your kiddos as needed. We also don't have to do every question with your group and may run out of time before we get to them all anyway.
